## SUMMARY

---

Computer Science graduate (2026) with a builder's mindset — during my Software Development internship at Bluestock, I helped ship a full-stack IPO portal that drove a 25% increase in customer acquisition and cut development time by 30%. I followed that up by independently building three more full-stack applications spanning fintech, Gov-Tech, and healthcare ML. Fluent in React.js, Node.js, Express.js, MySQL, and MongoDB, with a 2nd-place finish at the CodeFusion Hackathon. Ready to bring that same ownership and momentum to a full-time engineering role.

## EXPERIENCE

---

### SOFTWARE DEVELOPMENT INTERN

April 2025 - June 2025

*Bluestock*

- Developed a full-stack IPO portal for Bluestock using the MERN stack, resulting in a 25% increase in customer acquisition and a 30% reduction in development time.
- Presented IPO subscription dates, price bands, lot sizes, and official documents in a clear interface, resulting in a 20% increase in user engagement and a 15% reduction in customer support queries.
- Architected an admin dashboard with secure CRUD controls for IPO additions, updates, and record management, applying design pattern thinking and database design principles to streamline operations.
- Integrated RESTful APIs with MongoDB collections and transaction-based data flow to keep admin actions synchronized with the customerfacing experience across the platform.

## SKILLS

---

|                              |                                                                                                                                           |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages</b> | Python, SQL, Java                                                                                                                         |
| <b>Web Technologies</b>      | HTML, CSS, Javascript                                                                                                                     |
| <b>Core CS Concepts</b>      | Data Structures & Algorithms, OOP, DBMS, SDLC                                                                                             |
| <b>Frameworks/Libraries</b>  | React.js, Node.js, Express.js                                                                                                             |
| <b>Database</b>              | MySQL, MongoDB                                                                                                                            |
| <b>Developer Tools</b>       | Git, Github, Google Colab, VS Code, OpenAI Codex                                                                                          |
| <b>Soft Skills</b>           | Problem Solving, Attention to Detail Leadership, Emotional Intelligence, Team Collaboration, Time Management, Adaptability, Communication |

## PROJECTS

---

### Cryptocurrency Portfolio Dashboard

March 2026 – May 2026

MERN Stack — React.js, Node.js, Express.js, MongoDB

- Developed a responsive Cryptocurrency Portfolio Dashboard using the MERN stack, enabling real-time tracking of 10,000+ cryptocurrencies while improving portfolio management through an intuitive and scalable interface.
- Implemented secure RESTful APIs in Node.js and Express.js with JWT authentication, portfolio CRUD operations, and watchlist management using object-oriented development and design pattern best practices.
- Connected third-party cryptocurrency APIs to surface live prices, market trends, and trading data for 10,000+ digital assets, improving realtime application performance and user visibility
- Designed MongoDB schemas using Mongoose ODM, implementing model validation, document relationships, and efficient CRUD operations to improve data integrity and simplify backend development.
- Implemented client-side caching and rate-limit handling for third-party API calls, reducing redundant requests and maintaining smooth real-time updates even under high refresh frequency.

## E-Ration Shop Management System

October 2025 - December 2025

Full Stack — React.js, Node.js, Express.js, MySQL

- Developed a backend-driven Ration Shop Management Platform with a MERN-style stack and MySQL RDBMS, digitizing stock tracking, beneficiary management, and ration transaction workflows.
- Secured platform operations with JWT-based authentication and role-based access control through Express.js APIs, supporting admins, shop owners, and end users in a transaction-based system.
- Integrated the Groq LLM API with Express.js to build an AI-powered chatbot that assists users with ration eligibility, scheme information, and common service-related queries through natural language interactions.

## Skin Disease Prediction by Lesions

July 2025 – August 2025

Full Stack + Machine Learning — React.js, NodeJS, ExpressJS, Python, MySQL

- Built an intelligent application that combined Python-based ML models with a React.js front end and MySQL database, enabling seamless data flow and practical application development.
- Designed backend inference APIs to connect the machine learning model with the user interface, applying object-oriented development and clean design pattern structure for maintainability.
- Optimized API handling and the inference pipeline, achieving response times under 2 seconds for faster predictions and stronger transaction-based responsiveness.
- Improved system stability through debugging, error handling, and performance tuning while applying scalable database design and software engineering fundamentals.

## CERTIFICATIONS

---

- Java Programming
- Python Foundation
- SQL Programming
- Data Structures and Algorithms using Java

## EDUCATION

---

### Computer Science & Engineering, B.Tech

2022 – 2026

Vignan's Lara Institute Of Technology & Sciences

### MPC

2020 – 2022

Sri Chaitanya Junior College

### SSC

2019 – 2020

Sri Chaitanya School

## AWARDS

---

- **Runner-Up, CodeFusion Hackathon:**Secured 2nd place by delivering a data-driven solution under time constraints, applying Python and SQL to analyze datasets and present actionable insights. Recognized for strong analytical thinking, problem-solving, teamwork, and communication.

## VOLUNTEER

---

- **Social Media Lead GFG Local Chapter:**Serving as Social Media Lead, enthusiastically promoting coding events, recruiting participation from other colleges, and writing outreach content that strengthens the local tech community.
